

Abstract of the Disclosure

[00053] A system and method allows a group or individual to receive highly individualized feedback. Responses to queries relating to a performance area are used with multiple and often interdependent rules (e.g., mathematical formulae) to provide feedback directly based on the responses. Because most of the rules are linked to particular pieces of feedback, and the results of some of the rules are dependent on the results of other rules or multiple responses, variances in the responses to the questions yield different assessments (e.g., different feedback is provided). As every piece of feedback corresponds to a rule that has been satisfied, the assessment is highly sensitive and attuned to the responses that are given to the assessment queries.
